ASC0 Numatics Express guarantees short-term deliveries on an extensive range of our most popular products. Products can be dispatched from our European manufacturing plant on the same day your order is received. So you get your products faster, reducing downtime and increasing productivity.

A service that’s built around your business

ASC0 Numatics Express offers a comprehensive range of product options, designed to meet 90% of all potential application requirements.

It’s all part of our dedication to providing you with the highest possible levels of service, quality and performance to create long-standing customer relationships.

What does it mean for you?

Express delivery offers you a choice of two service levels:*

- **SAME DAY**: aims to provide shipment on the same day your order is received. If this is not feasible, shipment is guaranteed within three days
- **FAST SHIP**: guarantees shipment within five to ten days of your order being received

Getting your products quicker reduces downtime, allowing for greater productivity and improved efficiency. Plus, faster shipment lets you cut lead times and provide more accurate timing estimates when scoping out projects.

*Actual shipment time is dependent on product line and quantity ordered. Orders for the same day service must be received before 14:00 European time and are subject to a limit of 25 pieces of any product. Reasonable time must be added for transportation. For expected delivery dates of your required products, please contact your local sales office or distributor.
I need to be sure my deadlines will be met and my project will stay on track. I work to tight deadlines and need confidence in my supplier.

Maintenance Manager, OEM
ASCO Numatics Express is available for an ever-expanding range of products that covers up to 90% of all applications. If you have any requests for products that you would like to see included in the Express service in the future, please contact your local customer service representative or distributor.

Why Emerson

Emerson has an established worldwide reputation for technology innovation and industry leadership. Our technologies have served to transform entire industries, from the creative solutions provided by the smallest detail, to their greater collective impact on the environments we live and work in. Helping our customers achieve that distinct competitive advantage is our priority.

Problem solving is our passion. We are committed to driving technological progress and setting the standards of the future by maintaining a strong focus on research and development, and investment in training and future talent. Our approach includes extensive research on both emerging technology and key global market trends, and our own customer challenges enable us to prioritise our R&D efforts.

Emerson. Consider it solved.
